

# GEODIS Global Fuel Price Mechanism

6 – 19 January 2025

## GEODIS FSC Index Model For Price Agreements

To avoid different models depending on airlines and lanes, we have based our fuel surcharges on a dynamic mechanism index. This is a simplified harmonized fuel model based on jet fuel index (IATA), aircraft consumption per lanes, movement and aircraft type. The benefit of this set up relates to simplified administration on both sides.

### The Index Is Operated In The Following Way:

- We obtain the weekly Jet Fuel value in \$ per metric ton from IATA: <https://www.iata.org/en/publications/economics/fuel-monitor/>
- Twice per month we adjust the fuel surcharge based on the index trigger change, as per the jet fuel value updated on the IATA website
- There will be no fuel surcharge when the jet fuel value is \$450 per metric ton or less. Above this value any \$ 50 movement on the value per Metric Ton will trigger the increase or decrease of your fuel surcharge by \$ 0,05 on short haul trades and \$0.07 on long haul trades
- We obtain the Jet Fuel value on every 2nd and last Friday of each month from the IATA website. This is published during the following week and the new fuel surcharge will be applicable for all airfreight shipments with an Estimated Time of Departure from the Monday there after. Please refer to the last page of this communication for a detailed publishing schedule
- Additional info :
  - Cts/gal : US cents per Gallon
  - \$ / bbl : US dollar per barrel
  - \$ / mt : US dollars per metric ton
  - \$ 50 per metric tons give \$ 0.05 per kg on short haul and \$ 0.07 on long haul
  - The number of barrels per metric ton varies from country to country. After distillation, the number of barrels per ton can be anywhere between 6 and 8
  - 1 barrel = 42 gallons
  - Index value 2000 = 100 : *“These values are compared with average spot prices in 2000, similarly weighted by uplift during that period, to generate a percentage figure reflecting the overall rise in markets compared to the base period. As an example, an index value of 200 reflects a doubling of price since the year 2000.”*

# Fuel Index
